Protect Our Earth—Protect Our Ocean

Frequently Asked Questions

What Are My Options?

- Take your car to a commercial car wash that recycles water.
- Use a waterless cleaning product.
- Hire a mobile detailer that has the proper equipment to contain and dispose of wash water.
- "Do-It- Yourself", using the precautions provided on the next page.

Why is Car Washing A Concern?

Water supplies remain a concern and water conservation measures are prudent.

Car washing activities generate pollutants, such as heavy metals, soaps and detergents, oil & grease, toxic chemicals, acids and alkalis, and sediment.

Without precautions, these pollutants drain from the driveway, streets and gutters into the storm drain system, causing pollution of our creeks, beaches and ocean.

The rules are in effect to prevent water pollution of our creeks, beaches and ocean, which are vital to our quality of life & our economy, and to help prevent water waste.

So, Is It Legal to Wash My Car?

Yes, it is legal to wash your car. However, you must take certain precautions to save water, prevent water pollution and comply with State law.

What Can Happen If I Don't Follow the Rules?

Fines of up to \$1,000 may be issued (DPMC 15.10.040) for violations! Make sure you are in compliance by taking the precautions described in this brochure.

How Can I "Do-It-Myself" ?

The following precautions will help you maintain compliance with regulations.

- ✓ Minimize water use. You must use a bucket and hose with an automatic shut off nozzle.
- ✓ Use cleaning products as described on their labels and dispose of them properly. Even "biodegradable" products adversely impact our waterways.
- ✓ Vacuum or shake floor mats into a trash can—not on the street or driveway.
- ✓ Wash the vehicle on a vegetated or gravel surface where wash water can soak into the ground without creating runoff; or
Use sand bags or another device to create a berm to contain/direct/divert the wash water. It can then be sucked up with a wet vac for disposal in a utility sink, sewer clean out, or toilet or directed to a landscaped area to be absorbed.

SPECIAL NOTES:

- Please ensure that wash water completely soaks into the vegetation/ground to alleviate vector concerns and prevent unintentional runoff.
- Be careful not to discharge heavy debris, hazardous materials or anything that can clog the sink or toilet and/or cause a sewer back-up.

REMEMBER!

Dirty, soapy water running into the gutter, street or storm drain is considered a violation, even from your driveway!

TIP!

Using a bucket and a hose with an automatic shut off nozzle helps you comply with water conservation rules, reduces water waste and also saves you money!

TIP! Local Places for Sand Bags:

Ganahl Lumber:

949-496-5765

Saddleback Sandbags:

1-800-286-7263

Sepulveda Building Materials:

949-347-2100

White Cap Industries:

949-493-9448

TIP!

A wet vac can be used to collect the wash water before it drains off your property. You can then dump the water in a landscaped area or down a utility sink or toilet.

Who makes these Rules?

Water providers, such as South Coast Water District, Moulton Niguel Water District and San Juan Capistrano Utilities are required to implement a water conservation program to address water waste and supply.

The San Diego Regional Water Quality Control Board has mandated that the City regulate any discharges to the storm drain system. This includes polluted car wash water and even irrigation runoff! Please refer to Dana Point Municipal Code, Chapter 15, www.danapoint.org/municipalcode.
